

IN THE CLAIMS

No claim amendment is requested; however, Applicant has listed the presently-pending claims below for the convenience of the Examiner.

9. (original) A skylight with flashing profile for installation on a roof, comprising:

a frame defining an interior opening, the frame having a plurality of elements, each of the elements extending in a longitudinal direction;

a flashing profile having a rigid section comprising a first and second flashing leg, the first flashing leg carried by one of the elements of the frame, the flashing profile having a flexible section attached to the second flashing leg of the rigid section;

a rigid flashing profile connected to one of the elements of the frame; and

wherein the flashing profile and the rigid flashing profile extend along the longitudinal lengths of two different elements of the frame.

10. (original) The skylight with flashing profile of claim 9, wherein the second flashing leg has a raised folded portion, and wherein an end of the flexible section is attached to the raised folded portion and extends outwardly.

11. (original) The skylight with flashing profile of claim 10, wherein the flexible section is attached to the raised folded portion by crimping.

12. (original) The skylight with flashing profile of claim 10, wherein the flexible section is attached to the raised folded portion by adhesion.

13. (original) The skylight with flashing profile of claim 10, wherein the flexible section is attached to the raised folded portion by a combination of crimping and adhesion.

14. (original) The skylight with flashing profile of claim 10, wherein an end of the raised folded portion is turned down such that the end of the raised folded portion is substantially perpendicular with the first flashing leg.

15. (original) The skylight with flashing profile of claim 10, wherein the raised folded portion, the first flashing leg, and the second flashing leg define a channel for the drainage of water.

16. (original) The skylight with flashing profile of claim 9, wherein the flexible section is at least one member of the group natural rubber, natural elastomeric material, natural polymeric material, synthetic rubber, synthetic elastomeric material, or synthetic polymeric material.

17. (original) The skylight with flashing profile of claim 9, wherein the frame defines a rectangular shaped opening and has a top element, a bottom element, and two side elements, and wherein the flashing profile is connected to the two side elements, and wherein the rigid flashing profile is connected to the top and bottom elements.
